

Requirements and Recommendations for the Transportation of Children by Schools, Child Care Centers and other Organizations in North Carolina

Basic Provisions of the NC Child Passenger Safety (CPS) Law:

- All children less than 16 years old must be buckled up in either the front or back seat of any vehicle required by federal standards to be equipped with safety belts.
- Drivers are responsible for all children and youth less than age 16 in the vehicle.
- A child who is younger than age 8 AND who weighs less than 80 pounds must be properly secured in a child passenger restraint device (CRD) or booster seat.
- When a child reaches age 8 (regardless of weight) OR 80 pounds (regardless of age), a properly fitted safety belt may be used.
- A child who weighs at least 40 pounds may be restrained by a properly fitted lap-belt-only if no seating position equipped with a lap and shoulder belt is available. All lap and shoulder belt positions must be occupied before the lap-only safety belt is allowed.

Basic Types of Restraints

Rear-facing Only

Rear-facing Convertible

Front-facing Convertible

Belt Positioning Booster

Lap and Shoulder Belt

Lap Belt with Harness

No type of organization is exempt from the NC CPS Law, only types of vehicles. In addition, some programs may be subject to additional state and/or federal regulations as noted below.

WARNING: Belt-positioning booster seats must NEVER be used with just a lap belt. Belt-positioning booster seats can only be used with lap and shoulder safety belts.

Transporting Children in 15-Passenger Vans

15-passenger vans are required to have safety belts in all seating positions and are covered under the NC Child Passenger Safety Law. Organizations using vans or other passenger vehicles to transport children must comply with all provisions of the NC CPS law. Some programs, however, may be subject to additional state, federal, or program-specific regulations that prohibit the use of vans for transporting children unless they are built to school bus standards. (See "Additional State and Federal Regulations.")

Older models of vans may have lap-belt-only safety belts in all rear seats. In this case, children less than 40 pounds in weight are required to be in a front-facing restraint with a harness. Children weighing at least 40 pounds can be in just the lap belt without a booster seat.

Some rear seat positions in newer vans are equipped with lap and shoulder combination belts. If this is the case:

1. Place children less than 40 pounds in child restraints with harnesses and install these restraints in lap-belt-only positions.
2. Place children who are at least 8 years old OR weigh at least 80 pounds in properly fitted lap and shoulder safety belts. Shoulder belts tucked under the arm or placed behind the back are **ILLEGAL** and **UNSAFE**.
3. Place children less than age 8 AND less than 80 pounds in remaining lap and shoulder belt positions in belt positioning boosters.
4. Place children who are at least 40 pounds in any remaining lap-belt-only positions using just the lap belt. **DO NOT** use belt-positioning booster seats in the lap-belt-only positions.

Transporting Children in School Buses

Federal standards do not require safety belts on large buses with Gross Vehicle Weight Ratings (GVWR) of more than 10,000 pounds. School buses rely on strong, closely spaced, well-padded, energy absorbing seats and higher seat backs to "compartmentalize" and protect passengers during a crash. The size and construction of school buses as well as compartmentalization make them very safe vehicles.

Large buses are exempt from the NC CPS Law since they are not required to have safety belts. This exemption includes large school and activity buses as well as municipal transit and charter buses. Organizations that provide transportation on large buses do not have to install safety belts and use child restraints for the children being transported in order to comply with this law unless the organization is subject to additional standards and regulations. (See "Additional State and Federal Regulations.")

Safety belts are required on small buses that weigh 10,000 pounds or less. Some school buses (Types A1 and B1) fit into this category. Children being transported in these smaller buses are covered under the NC CPS law. Most of the safety belts on these smaller buses are lap-belt-only safety belts. Children less than 40 pounds in weight are required to be in a child restraint appropriate for their weight. Children who weigh 40 pounds or more can be restrained by just the lap belt without a booster seat.

WARNING: Belt-positioning booster seats must NEVER be used with just a lap belt. Belt-positioning booster seats can only be used with lap and shoulder safety belts.

Operators of smaller buses (under 10,000 lbs) required to have safety belts are subject to the NC CPS law and must comply. Note that most safety belts on school buses, even the smaller buses, are lap-belt-only safety belts that may not be used with belt positioning boosters. Refer to "Summary of Requirements to comply with the NC CPS Law and Recommendations for Maximum Safety in ANY VEHICLE" for recommendations.

Recommendations for Transporting Pre-School Children on School Buses

The National Highway Traffic Safety Administration (NHTSA) believes, and research confirms, that school buses are one of the safest forms of transportation in this country. Therefore NHTSA strongly recommends that all buses used to transport pre-school and school children be certified as meeting NHTSA's school bus safety standards. Using vans that do not meet the school bus standards to transport students could result in increased liability in the event of a crash.

The National Highway Traffic Safety Administration (NHTSA) further recommends that preschool age children are best transported in child restraints even on the larger school buses. If it is determined that a child must be transported in a child restraint on a bus, the NHTSA "Guidelines for the Safe Transportation of Preschool Age Children in School Buses" (February, 1999) should be followed. These guidelines are available on www.buckleupnc.org.

An additional resource is the "Guide for the Transportation of Preschoolers and Children with Disabilities for North Carolina Public Schools: Transportation Policies, Guidelines, and Best Practices," also available on www.buckleupnc.org.

Additional State and Federal Regulations

While federal regulations do not prohibit the use of vans by schools, they do require that new vans with a capacity of more than 10 persons purchased or leased with the intent to transport children to or from school or school events to meet the same safety standards applicable to school buses.

Head Start regulations require that children weighing 50 pounds or less must be restrained in height- and weight-appropriate child restraints. Programs transporting children to and from Head Start and Early Head Start programs must use school buses or "allowable alternate vehicles" by January 2006.

An "allowable alternate vehicle" is a vehicle designed for carrying eleven or more people, including the driver, that meets all the Federal Motor Vehicle Safety Standards applicable to school buses except those related to flashing lights and stop arms. Vans that do not meet the school bus standards are prohibited. Head Start transportation regulations are available on www.buckleupnc.org.

North Carolina Child Care Transportation standard NCAC 09.1001 covers NC child care centers and requires that all children less than 2 years of age to be transported in a child restraint, even on buses. Thus, child care centers transporting children less than age 2 on buses may need to retrofit the bus with belts in order to use child restraints for these children. Transportation standards for NC child care centers are available on www.buckleupnc.org.

Summary of NC Restraint Requirements for Vehicle Types

- ▶ No type of organization is exempt from the NC Child Passenger Safety Law, only types of vehicles.
- ▶ **Buses weighing more than 10,000 pounds:**
 - Are not required by Federal Standards to be equipped with safety belts and are exempt from the NC CPS law.
 - Organizations that provide transportation on large buses do not have to restrain children in safety belts or child restraints to comply with NC law.
 - Organizations that provide transportation on large buses may be required to restrain children in safety belts or child restraints to comply with applicable state, federal or program-specific regulations.
- ▶ **Buses weighing under 10,000 pounds:**
 - Are required to have safety belts.
 - Organizations that provide transportation on smaller buses are subject to and must comply with the NC CPS law.
- ▶ **Vans and mini-vans:**
 - Organizations that provide transportation on vans of any size are subject to and must comply with the NC CPS law.

Summary of Requirements to comply with the NC CPS Law and Recommendations for Maximum Safety in ANY VEHICLE:

- ▶ In positions equipped with lap and shoulder safety belts, restrain children:
 - In properly installed child restraints with harnesses if they weigh less than 40 pounds.
 - In belt positioning booster seats if they are both less than eight years old and weigh less than 80 pounds.
 - In properly fitted lap and shoulder belt if they are at least eight years old or if they weigh at least 80 pounds.
 - **RECOMMENDATION:** Continue to use booster seats until both the lap and shoulder belts fit correctly on the child.
- ▶ In positions equipped with just lap belts, and if there are no lap and shoulder belted positions available, restrain children:
 - In properly installed child restraints with harnesses if they weigh less than 40 pounds.
 - In properly fitted lap-only safety belts if they weigh 40 pounds or more.
 - **RECOMMENDATION:** Children over 40 pounds should be restrained by options other than just the lap belt if possible. These options may require additional installation in vehicles because they are anchored with top tether straps in addition to safety belts. Recommended options for children over 40 pounds in lap-belt-only positions include:
 - There are several models of restraints with harnesses that can be used for children heavier than 40 pounds.
 - There are harnesses of various types that can be used for children over 40 pounds (example: E-Z-On Products).
 - Retrofit shoulder belt kits are available for some older models of cars and vans. Check with the vehicle manufacturer for availability.
